

Resolution:**Health-Threatening Conditions: Mold**

Whereas, health-threatening, dangerous mold has been found in the TV studio, affecting ceilings, walls, and costly equipment regularly handled by students and faculty, and;

Whereas, protecting the students, faculty and staff from the potentially of mold contamination requires relocating our TV facility, staff, interns, volunteers, and classes;

Whereas, new mold has just been identified on the H-VAC system potentially affecting a much larger population in Campus Center, and

Whereas, mold is currently being addressed in the residence halls with strong measures including cleanup, new mold-resistant filters and high-powered dehumidifiers among others;

Be it resolved that the College immediately employ what OSHA designates as "licensed mold assessors" to conduct a "licensed mold assessment" of the G-wing area of Campus Center and other areas known to be affected by mold on campus, in compliance with county, state, and federal standards.

Submitted to the Faculty Senate on September 6, 2019 by the American Studies/Media & Communication department.

Approved as amended by the Faculty Senate on September 6, 2019.
